

Dear Subscriber,

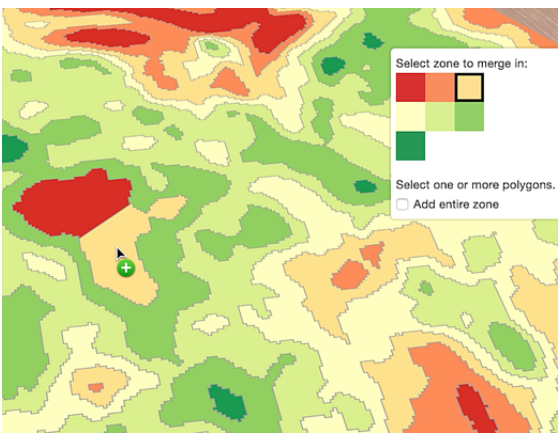

This is a monthly update on the GeoPard Agriculture. We are growing as a team and continue to release new modules and features.

## Multi-layer analytics

We introduce multi-layer analytics. Now you can create management zones based on combination of several data layers

[Read more](#)

## Merge and split zones

Highly needed feature to customize management zones by a person. You can split polygons and assign polygons or entire zone to another class

## Sharing of data between accounts

Now it is possible to share your farms' data with a trusted advisor, colleague, agronomist or local dealer.

You manage who has access to your data and organize the setup needed for your work.

### New team members:

We are growing as a team and to deliver product features with even more frequency and higher quality a few highly skilled professionals joined us: UX designer, Frontend and Backend engineers.

### Other improvements and new features:

- WDRVI index, it is more accurate than NDVI under conditions of moderate to high biomass ( $LAI > 2$ )
- Export of field boundaries
- Yield data average and total per area calculations
- Management zones based on any of [6 topography models](#)

Sincerely yours,  
Dmitry from GeoPard
